A Better Audio & Home Theater Experience

Introducing "Class T" Amplifiers

From the company known for making the world's most advanced vacuum tube electronics, comes a new line of solid-state amplifiers that sounds more like tubes than anything we have previously experienced. Audio Research calls them "Class T" amplifiers because of their unique implementation of a switch-mode output stage. The advantages offered by this technology are that they make incredible amounts of power, while generating almost no heat and they draw virtually no current when idling. This means they can be powered-up all the time for optimum performance without turning your listening room into a sauna or running up your electric bill. And the sound will bring tears to your eyes! Smooth, open and airy with powerful bass and great dynamics. All of these new amplifiers also feature both balanced XLR and unbalanced RCA connections so they can be easily adapted to any system. The pricing is as follows:

150.2 Stereo Power Amplifier

150 watts per channel into 8 ohms, 300 watts per channel into 4 ohms, \$2,495

300.2 Stereo Power Amplifier

300 watts per channel into 8 ohms, 500 watts per channel into 4 ohms, \$3,995

150M Multichannel Amplifier

as 150.2, configurable up to 7 channels, \$2,995 + \$900 per channel

So, if you've always wanted the sound of an Audio Research tube amplifier, but just don't consider yourself a "tube person" (we should talk), these solid state wonders are what you've been waiting for. If you'd like to expand your system from 2-channel stereo to multichannel, the configurable 150M provides a great migration path that can complement your existing amp. Come in and listen to this breakthrough technology; you won't be disappointed.
