VTM200 Mono Tube Amplifiers

The VTM200s are made for those who want Reference quality tube monoblocks in the 200 watt power range per channel. The VTM200s occupy the same size chassis as the VT100, making them easy to manage and even easier to fit into any size room. Inside are new specially designed transformers, new advanced power supply techniques utilizing new types of tubes and massive energy storage, the latest Infinicaps and cost-no-object parts, and an automatic tube biasing control system similar to the one found in the Reference 300 and 600 amplifiers.

The sound quality is nothing short of remarkable. Like the Reference amps, nothing puts you in the venue with the performers the way the VTM200s can. The bass is incredibly powerful with excellent control and articulation, while the highs have the sort of see-through quality that only ARC is able to achieve. Transients explode out of the loudspeakers effortlessly without sounding hyped or "hifi." Instruments sound more like themselves in both texture and color than ever before. The VTM200s are big enough to drive almost any modern loudspeaker with power to spare, while having finesse that not only equals, but surpasses the very best small tube amplifiers.

The VTM200s cost just \$7500 each, or \$15,000 for the pair- a small price to pay for the best sounding 200 w/ch amplifiers money can buy!
