A Better Audio & Home Theater Experience

Fujitsu Releases the World's Most Advanced 55" HDTV Plasma Television

The next generation of plasma technology is here and once again Fujitsu is a step ahead of the competition. This new model is the first to utilize Fujitsu's patented technology which couples elongated pixels with their breakthrough ALiS (Alternate Lighting of Surfaces) drive system. At the 2004 Consumer Electronics Show the reviewers were raving about the picture quality which actually outperforms Fujitsu's own excellent 50 inch model, widely considered the best you could buy. With the finest picture quality in the industry and a screen that has 142 more inches of viewable surface area than a 50 inch plasma, this new Fujitsu is the cream of the crop. If you don't quite have the space for the new 55, take a look at the new HD version of their venerable 42" model; it has 1024 x 1024 resolution and much of the same technology as the 55. Better yet, all Fujitsu models include the best warranty in the industry: a full 3 years *with in-home service*. With an investment of this magnitude, the warranty ought to be a key element in your purchase decision. For a comprehensive discussion of plasma technology, and why you should care, read our plasma white paper under the "About The Equipment" button.
