DTM 5.3 Stereo Receiver

3-Zone, 2-Source Stereo Receiver with A-BUS

Custom installers look no further - the DTM-5.3 defines the term "integration". It incorporates more functionality into one box than some entire receiver lines! Of course you get the robust, high-current amplifiers that feature Wide Range Amplifier Technology - WRAT - for extended frequency response up to 100 kHz. What really make this receiver shine, though, are the integration-oriented features: A-BUS for simple, efficient multi-room applications; rear IR input and output for Zone 2; and 12V input and output triggers for remote turn on.

Other amenities include: direct access tuning for discrete radio station selection, and nine unique IR codes for multiple receivers installed in a single location.
