A Better Audio & Home Theater Experience

High Performance "Whole-House" Audio from Ultra Fidelis & SpeakerCraft

It may be a well-kept secret, but Ultra Fidelis has been designing, installing and supporting sophisticated multi-room audio systems for years. We looked long and hard before deciding to partner with industry leader SpeakerCraft. We are fond of saying, "if Bose spent as much money on product development as they do on marketing, their systems might sound as good as SpeakerCraft's" and when you hear them, you'll feel the same way. From their intuitive control systems to their "bulletproof" amplifiers and speakers SpeakerCraft gets it all right. Ultra Fidelis has extensive experience designing and installing these "lifestyle" systems in new homes and during remodeling projects, but we also have the skills and experience to retrofit these systems into any home.

We design systems that distribute music throughout the home (including your screened-porch, patio, or pool area) using a "zoned" concept. This topology allows each zone (or room) to independently select a music source and to fully control that source from a keypad or a handheld remote control. This means while you are enjoying an NPR broadcast out on the deck, your spouse can be playing a favorite CD in the workout room. SpeakerCraft invented the architectural (built-in) loudspeaker and their speakers carry a lifetime warranty. (They're also waterproof which makes them ideal for demanding environments like bathrooms, spas, and outdoors.) The modular design of the product line enables us to conveniently locate source components (tuner, CD player, satellite radio, etc.) while the control, switching, and amplification can be placed out of your way in a closet, basement or attic. A couple of new products, slated for summer release, will enable whole-house video distribution as well.

The breadth of the SpeakerCraft product line enables us to design systems for virtually any home or budget. We are in the process of creating a static demonstration system at the store, but in the meantime check out some of our past projects on the website under the "Custom Installation" button on the left side of the home page.
