

SpeakerCraft Wide Coverage Series

The Wide Coverage Series speakers are actually a pair of speakers in one convenient package with two sets of speaker inputs just as any normal separate pair of loudspeakers would have. They can be utilized in a few different ways. First, they are ideal for someone who wants outdoor stereo sound in one box. Just purchase one of them and wire left channel sound to one side and right channel sound to the other. A second possibility is to purchase two of them and wire them the way you would any other pair of speakers, one complete box as the left channel and the other as the right. A third option is to purchase a pair and wire each box for L/R stereo sound. This will give uniform stereo coverage to all listeners across a much larger area.
