

A Better Audio & Home Theater Experience

Progress Through Innovation

"To thrill customers who want the most out of life from music, information and entertainment systems that benefit from quality sound." That's a mission statement worth remembering. Managing Director Ivor Tiefenbrun, melding a family heritage in super-precision engineering with his lifelong love of music, produced the LP12 turntable in 1973. Quite arguably the first hi-fi product to result from an "ears first" design approach where sonic performance is paramount and the specification is reduced to its rightful place as quality control tool, the LP12 crossed all other turntables of the day off the shopping list after a brief audition.

Not content until music lovers could enjoy a complete Linn system from source to loudspeaker, Ivor and his staff have built Linn into one of the world's foremost high performance audio and home theater brands. Nearly all Linn products are assembled in the factory in Glasgow, each component by one person whose name goes on the bottom as a point of pride and accountability.

Additionally, Linn products are consistent award winners for industrial design and integrate seamlessly into virtually any lifestyle. Products such as the Classik series bring integrated Linn systems to new levels of affordability while Sondek CD12, Unidisk and the venerable Sondek LP12 reaffirm their commitment to aiming and achieving at the very top of the performance ladder. Ivor's guiding philosophy is to treat customers, suppliers and employees in the same way that he would like to be treated. It's no wonder, then, that Linn owners are some of the most ardent you'll find.
